

ECLISSE
40 COLLECTION

ECLISSE 40 Collection

The frame seen from
a new perspective.

Not settling for the status quo, not taking anything for granted and constantly challenging the world view creates the space to design from a new perspective. Because just when you think you know something, you have to change your approach and look at it from a new angle.

The frame is now
experiencing a new
revolution, a great
innovation called the
ECLISSE 40 Collection.

40°

Inspiration comes from the past

ECLISSE 40 is the brainchild of the two designers, Francesco Valentini and Lorenzo Ponzelli.

"It all came from the feeling that something was missing from the world of doors. Something that would evolve the very concept of a flush-to-the-wall door or a minimal door. Certain that creativity arises from the negation of a possibility, or from necessity itself, we imagined something that would leave a sign of its presence, a decorative element. This had to be done not by adding, but by removing material, and visible had to be created from invisible. All this without neglecting the functional and practical aspect: we also wanted to create a protective element for the sharp edges between the wall and the door. And so we did".

Inspiration takes its cue from observation

In ancient buildings, especially in the Romanesque and Gothic period, walls in proximity to windows were inclined and widened towards the interior of the room.

The aim was to direct as much light as possible inside, even from small openings. In architecture, the technique is identified with the term "splay".

Discovery consists of seeing what everybody has seen,
and thinking what nobody has thought.

A. Szent-Gyorgyi

Patent Design

With ECLISSE 40, the frame is shown for the first time: the element emerges from the wall leaving a mark, becoming a discreet but visible presence. The frame is no longer just a technical and functional element, but also a decorative element itself.

5 Points of view, one great innovation

Doing old things in a new way: this is innovation.
J.A. Schumpeter

1. INCLINATION

to progress

The new ECLISSE 40 frame is the result of ECLISSE's quest for perfection, which makes technical detail a priority. A single structure for both solid and stud walls.

PERFECT FINISH

Special grooves allow a perfect finish flush with the wall, avoiding the formation of cracks.

PROTECTION

The special shape of the frame creates an intrados with the wall splayed at 40 degrees, protecting the sharp edges between the wall and the door.

ROBUST

The fixing chambers stiffen the structure and keep the profiles perfectly at 40 degrees

Each fold of the aluminium profile performs a specific technical task, in order to obtain a beautiful product but also with attention to detail.

PERFECT JUNCTIONS

Horizontal and vertical profiles match up perfectly to obtain a precise and clean angle.

ANODISED ALUMINIUM

Anodising to 10 microns makes the profile more resistant to corrosion and increases its surface hardness.

The raw version is coated with a primer so that it can be painted in any colour.

2. FINISHINGS

The strength of aluminium

From being an invisible and structural element, for the first time, the frame now displays beauty and design.

Developed by ECLISSE research, this aluminium frame gives the door a special splay, a feature that completes and enhances it, giving it a unique, precise and minimal look.

The frame is made completely of anodised aluminium. The electrochemical process of anodising creates a protection that prevents the wear and tear of the metal and gives it greater resistance to weathering, stains and scratches. Anodising also facilitates repainting: the quality and aesthetics of the colouring are particularly admirable.

2. FINISHINGS

The elegance of aluminium

FINISHING
PRIMER-COATED

FINISHING
LIGHT BRONZE

The special inclination of the frame allows it to play on light and shadows, creating a sense of depth and a new look.

FINISHING
DARK BRONZE

FINISHING
GRAPHITE BRONZE

3. DESIGN

The frame as a decorative element

A profound change and a point of no return that, however, does not create distortions and gives the door an important presence. An absolute novelty in the market.

4. VERSATILITY

Beauty becomes versatile

ON ONE SIDE,
a door flush with the
wall gives elegance and
discretion.

ON THE OTHER,
geometric lines that go
deep. The frame empties
the wall and enhances
the room. Like a picture
frame, it encloses the
door and invites us to
cross through it.

5. AMBIENCE

The perfect picture frame for every room

A product designed for a diverse public and a variety of applications.

IT'S NOT HOW
GOOD YOU ARE,
IT'S HOW GOOD
YOU WANT TO BE.

Towards perfection

Details that makes the difference

A single frame, for both stud and solid wall. Supplied with a plastic protection to prevent it from getting dirty or being scratched on site.

Paintable and durable over time

The aluminium frame undergoes an anodising treatment against oxidation to obtain the different ECLISSE finishings.

The primer-coated version favours the adhesion of the paints.

NO cracks!

The frame profile is specifically designed to avoid cracks.

Very robust frame

The frame is made of anodised aluminium and weighs about 3.5 kg per linear meter (for Th. 125 mm)

The quality of ECLISSE products can be seen during installation and in everyday use, but it is the details that make the difference.

Because, besides ease of installation and perfection of the mechanisms, the unique design is appreciated only by looking closely at the product.

The door is recognisable by the presence of the ECLISSE logo. A universal shape to be adapted to the opening direction (right or left).

Tensioning rod

A special device adjustable at any time that keeps the door panel in constant tension, ensuring the perfect coplanarity between the door and the wall.

Magnetic lock

With a modern design and minimalist lines, it remains "flush" and ensures an extraordinarily silent closing.

Adjustable strike plate

Minimalist design, stays flush and allows to remedy any small installation imperfection ensuring the perfect closing of the door.

3 Adjustable hinges

Adjustable on the 3 axes (height, width, depth) for a perfect calibration of the perimeter size.

Note: if the weight of the door panel exceeds 50 kg (max 65 kg), 4 hinges are necessary.

Openings

OPENING TYPES - ECLISSE 40 SINGLE DOOR

PUSH DOOR

PULL DOOR

WITH OR WITHOUT HEADER

The peculiarity of ECLISSE 40 is the possibility to be installed full-height, with or without header, in order to obtain an effect of full integration between the door, the wall and the ceiling.

Components

SUPPLY METHODS

COMPLETE SET

FRAME + PRIMER-COATED DOOR PANEL + HARDWARE

SINGLE ELEMENTS

HARDWARE SET FOR ECLISSE 40 (handle not included)

Black door gasket to be cut to the required length, white for the primer-coated version

Magnetic lock available with or without key and with thumb turn

Black adjustable strike plate, satin chrome for the primer-coated version

Hinges and Hinge covers available in colors matching the frame finishings

Screw bag

FLUSH BASEBOARD

ECLISSE 40 can be matched to the ECLISSE flush baseboard, an aluminium profile designed to allow the installation of a 58 mm high flush to the wall skirting. For a higher skirting, it is enough to place the profiles above the finished floor level.

SOLID WALL version

STUD WALL version

Applications

PUSH DOOR

PULL DOOR

Frame on solid wall - Finished wall thickness 108 mm

Frame on solid wall - Finished wall thickness 125 mm

Frame on stud wall with one plasterboard - Finished wall thickness 100 mm

Frame on stud wall with two plasterboards - Finished wall thickness 125 mm

The frame fits both stud and solid wall. For solid wall 6 clamps are cemented in the special spaces created in the wall. For stud wall the frame is fixed with screws to the metal structure through the existing holes.

The doors

The door panels for ECLISSE 40 are available in the following finishings:

- untreated primer-coated door panels, ready to be painted or lacquered
- Alkorcell® door panels in brushed white or grey
- lacquered door panels in different RAL colours
- door panels in wooden essences such as natural oak, white ash, natural ash, open pore white lacquered RAL 9010 ash

Door panels have a standard tensioning rod starting from H 2000 mm.

The installation

Easy and quick assembly

ECLISSE 40 FRAME ON STUD WALL

Once the frame has been removed from the packaging, place it inside the wall opening prepared with a reinforced studwork or a solid wood structure.

Fix ECLISSE 40 carefully checking the correct levelling of the frame. Remove the OSB spacers.

DO NOT REMOVE THE CARDBOARD PROTECTIONS.

1
Apply the plasterboards.
The application of a plasterboard scrim tape along the entire perimeter is recommended.

Sectional view of the screw on the studwork.

2
DO NOT remove the cardboard protections.
Place masking tape on both sides along the entire perimeter to protect the visible aluminium part and plaster.

3
Flush to the wall finish.

4
Remove the adhesive tape after each finishing coat before it dries to avoid cracks.

5
Remove the protections from the frame.
Secure the door panel and its hardware. Then proceed with the painting of the door (if it is a raw primer-coated door panel).
DO NOT remove the anti-scratch protections.

ECLISSE 40 FRAME ON SOLID WALL

Once the frame has been removed from the packaging, place it inside the wall opening carefully checking the correct levelling of the frame. Fix ECLISSE 40 by blocking the 6 clamps (3 on each sides) with mortar inside the holes previously made in the bricks.

**DO NOT REMOVE THE
CARDBOARD PROTECTIONS.**

DO NOT remove the cardboard protections.
Place masking tape on both sides along the entire perimeter to protect the visible aluminium part.

Flush to the wall finish.

Proceed to plaster and skim the wall.

Sectional view of the anchor clamp.

Remove the adhesive tape after each finishing coat before it dries to avoid cracks.

Remove the protections from the frame. Secure the door panel and its hardware. Then proceed with the painting of the door (if it is a raw primer-coated door panel). **DO NOT remove the anti-scratch protections.**
